

Standard Spiral Bevel Gears

Amarillo Gear Company

Call Amarillo Gear Company for your spiral bevel gear requirements because Amarillo Gear Company has:

- The largest inventory of standard spiral bevel gears in the world, consisting of more sizes and ratios available off-the-shelf than any other gear company in the world.
- Over 90 years of spiral bevel gear and right angle gear drive engineering experience.
- A track record of over 60 years of right angle gear drive manufacturing experience.
- Spiral bevel manufacturing capabilities from 3" to 100" pitch diameter.
- The largest rotary type spiral bevel generator in the world. (One of only three in the United States.)
- Carburizing capability to 48" and die quenching capacity of 44" pitch diameter.
- Hard cutting capability from 28" to 100" pitch diameter.
- An impeccable reputation for quality products and customer-oriented service.
- The ability to supply a wide range of spiral bevel gears, either from our large inventory of our standard gears, modifications of our standard designs, or gears of customer design.

Take advantage of our inventory, engineering experience, manufacturing expertise and facilities, and quality spiral bevel gears as if they were your own!

Typical Service Factors

Prime Mover	Duration of Service	Uniform Load	Mod. Shock	Heavy Shock
Electric Motor	Up to 10 hrs./day	1.25	1.5	1.75
	24 hrs./day	1.25	1.50	2.00
Multi-Cyl. Engine	Up to 10 hrs./day	1.25	1.50	2.00
	24 hrs./day	1.50	1.75	2.25
Single Cyl. Engine	Up to 10 hrs./day	1.50	1.75	2.25
	24 hrs./day	1.75	1.75	2.50

Amarillo Spiral Bevel Gears

Amarillo Spiral Bevel Gears are designed and proportioned according to the Gleason Spiral Bevel Gear System. These gears have either 35 or 30 degree spiral angle and 20 degree pressure angle. All members are machined from alloy steel, case hardened, lapped, and tested in pairs. Mounting distance, optimum backlash, mating teeth, part number, and serial number are etched on each member. Bores and mounting surfaces are finish ground. Ring gears are die quenched to minimize distortion.

Torque ratings shown are based on AGMA standards and are shown without any dynamic or service factors applied. The following conditions were also considered in the rating calculations:

1. Gears must be properly assembled in housings designed to insure correct gear alignment and position under maximum load; and with housings sized to prevent overheating.
2. Bearings must be properly sized to position the gears correctly under all load conditions.
3. Adequate lubrication must be provided.

There are larger sizes and other ratios available, and we also can manufacture custom spiral bevel gear sets according to your specific needs which may not be met by our standard product line.

Rating Calculations

To select a set of spiral bevel gears, the following procedure is suggested:

1. Select a service factor based on experience, AGMA standards or the chart of typical service factors (on the preceding page).
2. Calculate the working pinion torque from the transmitted horsepower and pinion speed. (Equation 1)
3. Calculate the required base torque rating. (Equation 2)
4. Select the proper gear set from the rating data chart for the ratio required.
(An "L" or "R" in the part numbers indicate left or right hand spiral.)
5. Calculate actual service factor based on gear set selected.

$$T_{wp} = \frac{63025 \times \text{HP}}{\text{RPM}_p} \quad (\text{Equation 1})$$

Where:

- T_{wp} = working pinion torque (lb-in))
- HP = horsepower
- RPM_p = revolutions per minute (pinion)

$$T_{rp} = \frac{T_{wp} \times \text{SF}}{K_v} \quad (\text{Equation 2})$$

Where:

- T_{rp} = base torque rating, pinion
- S.F. = service factor (see chart)
- K_v = dynamic factor

$$K_v = \sqrt{\frac{78}{78 + \sqrt{\text{PLV}}}} \quad (\text{Equation 3})$$

Where:

PLV (Pitch Line Velocity) = 0.262 x RPM x pinion pitch diameter. (Equation 4)

Example:

- Required horsepower = 175 @ 2150 RPM input.
- Ration required = 2:1
- Desired S.F. = 1.5 (from chart)

$T_{wp} = 5130 \text{ lb-in}$ (From Eq. 1)

$T_{rp} = 9618 \text{ lb-in}$ (assume $K_v = .8$ for first try) (From Eq. 2)

From 2:1 data select Drawing Numbers 262 GR and 262 PL.

Calculate actual K_v :

$\text{PLV} = 0.262 \times \text{RPM}_p \times \text{pitch diameter (pinion)} = 2816$ from Eq. 4)

$K_v = .771$ (From Eq. 3)

$T_s = \text{Gear set rating at application speed} = T_{rp} K_v = 8316 \text{ lb-ins}$

$\text{SF} = T_s / T_{wp} = 8316 / 5130 = 1.62$

Therefore, this selection is adequate.

Note: The dimensions and ratings shown in the preceding data sheets are intended as a design guide only, and are intended for use by competent gear engineers. The designs shown are subject to revision, and therefore the customer should verify dimensions and ratings. Amarillo Gear Company will supply certified dimensional drawings for mounting design upon request. We will also assist in the selection of the proper gear set for your application, but the ultimate responsibility for the application of these gear sets rest with the customer.

Spiral Bevel Gear Design Data

Power or torque to be transmitted: _____

Input Speed: _____ Output Speed: _____

Application and prime mover: _____

Service Factor Required (if known): _____

Maximum OD (Gear): _____ Maximum OD (Pinion): _____

Is exact ratio required? _____

Sketch of Application

Catalog OG-1996
